

Frankensolar's first one hundred percent foreign subsidiary was established in February 2009. Based in Prague, Frankensolar CZ s.r.o. supplies the Czech specialist trade with proven Frankensolar quality.

An excellent sunshine record and the Czech government's Renewable Energy Act combine to make PV extremely attractive in the Czech Republic. Frankensolar's high-quality product portfolio ensures that its subsidiary Frankensolar CZ s.r.o. is able to provide the Czech specialist trade with high-quality photovoltaic brands, thus ensuring that the country's renewable energy industry is supplied with the highest quality materials. The business model at the Czech subsidiary is exactly the same as at Frankensolar:

high-quality solar energy systems are only sold to specialist trade partners. Installers are provided with planning support and, in the case of interesting projects, Frankensolar offers its know-how to specialist trade partners, thus strengthening its customer's position.

By the end of the first year of trading in 2009, over 5 MWp PV output had been installed by partners and supplies from Frankensolar CZ s.r.o. and its specialist traders.
